

## Easy-to-Use Reverse WHOIS Service to Find Domains with Specific WHOIS Record Identifiers

Uncovering domains owned by a particular person or organization doesn't have to be manual and tedious.

Getting access to the domain portfolio of a threat actor, supplier, client, competitor, or any entity can provide a broader view of their activities and infrastructure. However, manually pivoting off a WHOIS identifier—e.g., an email address, a company or person's name, a phone number, or a street address—isn't practical. Automating the process also requires advanced technical skills. To catch up with fast-paced domain activities, you need access to a Reverse WHOIS service that can accurately return all the domains associated with an entity of interest by looking for any identifier in their current and historical WHOIS records.

Keep track of an entity's domain footprint with the most comprehensive domain intelligence on the market.

Our domain intelligence actively tracks 565+ million domains and has historically tracked 774+ million domains, accumulating 15.6+ billion WHOIS records across 7,298+ TLDs. We partner with the world's largest Internet data aggregators, allowing us to add 210,000+ NRDs and update 320,000+ WHOIS records daily. Our reverse WHOIS service is accessible through an API, a web-based lookup tool, and as part of our 9-in-1 Domain Research Suite (DRS). [Test](#) our reverse WHOIS service now or [contact us](#) for more information.

### Practical Usage

Discover domains connected to a particular individual or organization for:

- **Brand protection:** Look for domains currently or historically owned by known brand infringers and cybersquatters.
- **Threat actor profiling:** Use any public identifier related to threat actors to track their domain footprints and study their malicious infrastructures
- **IoC expansion:** An IoC with unredacted WHOIS data can lead to additional domains that currently or historically contain a specific WHOIS record detail.
- **Competitor research:** Uncover domains owned by competitors to keep track of their upcoming product launches, mergers and acquisitions, and other strategic activities.
- **Third-party risk management:** Study the domain portfolio of a supplier, vendor, or any third party to check for possible threats or vulnerabilities.
- **Attack surface management:** Get a list of domains owned by a company as a starting point to check for vulnerabilities in their domain assets.

**774M+**  
*domains tracked historically*

## What Data Points Are Included?

Our reverse WHOIS service allows you to find domains connected by different WHOIS fields. See the table below for their brief descriptions.

Search Field	Description
Domain name	Search for domains that contain a specific string in their second-level domains
Name server	Uncover domains currently hosted on a specific name server
WHOIS server	Look for domains using a given WHOIS server
Domain status	Use a domain status as a search string to look for properties with the given status code
Registrar details	Use a registrar's name or email address as a search string to retrieve domains under the given registrar
Registrant details	Discover domains containing an email address, a person's or an organization's name, a phone number, and a street address in their WHOIS registrant records
Administrative contact details	Look for domains containing an email address, a person's or an organization's name, a phone number, and a street address in their WHOIS administrative contact records
Billing contact details	Find domains containing an email address, a person's or an organization's name, a phone number, and a street address in their WHOIS billing contact records
Technical contact details	Discover domains containing an email address, a person's or an organization's name, a phone number, and a street address in their WHOIS technical contact records
